

Digitizing record keeping in the classroom

Streamlining the way teachers evaluate students with special needs to improve record keeping and protect schools from lawsuits

CHALLENGE

The Orange County Department of Education's special education department wanted to improve the way instructors were tracking students' progress.

SOLUTION

By digitizing student forms, teachers were able to create more customized evaluations that met students' unique needs.

IMPACT

The ability to submit evaluations with their phone increased the total number of evaluations submitted by more than 50%.

Better records ensured compliance and protected the school against litigious parents.

CONTEXT

When a student enters a U.S. special education program, they receive an Individualized Education plan, or IEP, a document that outlines the student's needs and the goals the school must help the child accomplish.

PARENTAL CONCERN

Parents want to know that their child is getting the resources they require and that the school is holding itself accountable for the their child's progress.

ADMINISTRATION FEARS

Schools are regularly sued by parents who feel their child's needs are not being properly met.

INSTRUCTOR FRUSTRATION

Teachers want to keep accurate records, but their time is limited and they prefer to put energy into teaching rather than bureacratic tasks.

Need finding

Questions

Why aren't teachers tracking student progress in the proper way?

How can we encourage more accurate record keeping?

Process

Interviewed two admins, five teachers, three behavior analysts and two parents

Reviewed examples of student IEPs and evaluation forms

Competitive analysis of goal tracking software

Observations

Older instructors are uncomfortable using unfamiliar software

Paper evaluation forms require two hands (or a desk) to complete

Goal descriptions are quite lengthy.

Behavior analysts manage creation of individualized education plans and are most invested in a solution

Design Principles

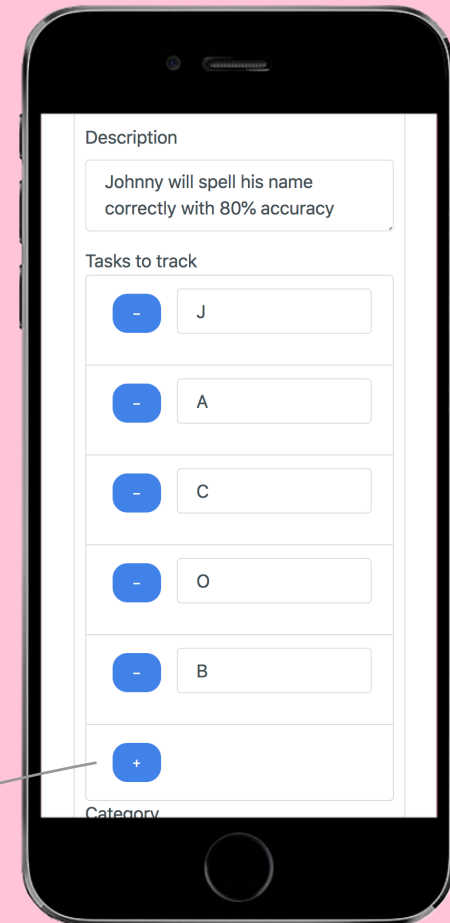

Any software solution needs to be simple and easy to use

Logging evaluations needs to be straight forward and designed for mobile phones

Allow teachers to import goals or copy and paste text from their desktop.

Software alone will not solve the problem. More process and accountability are needed

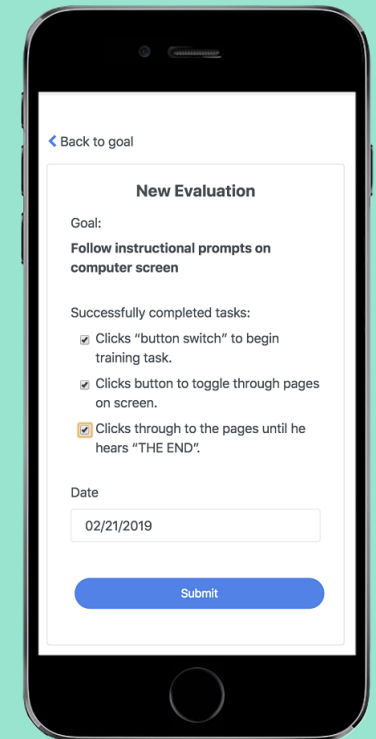

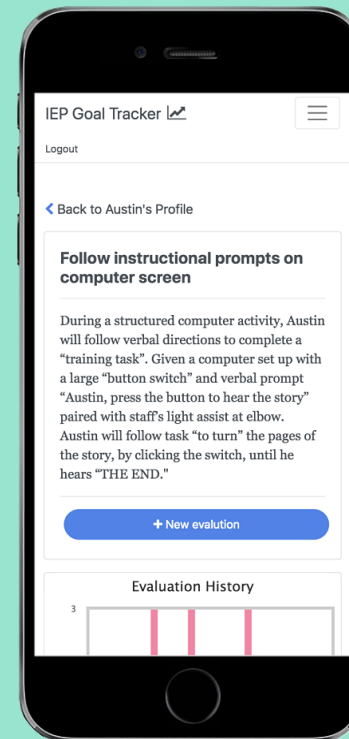

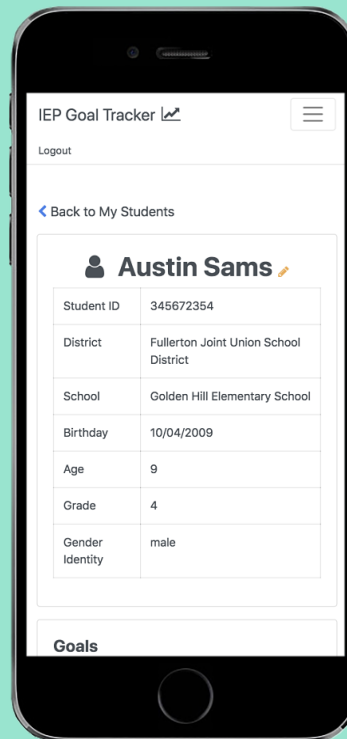

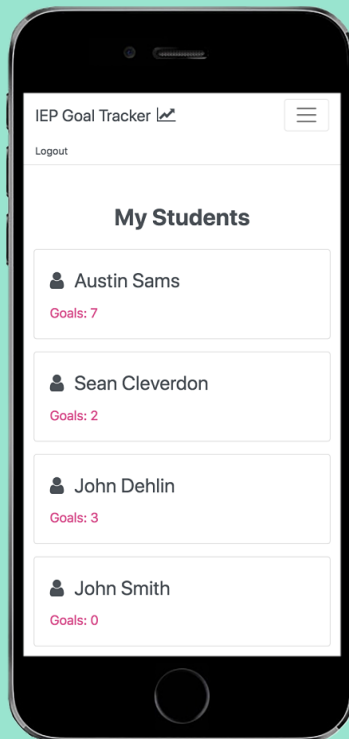

Flexible templates

[illegible][illegible]

Quick and easy

Paper evaluations require a surface to write on, two hands and shuffling through dozens of forms.

The mobile web app allows teachers to log an evaluation in as few as 4 taps on their phone.

Real time data visualization

- Parents expressed a desire to receive updates more frequently than their child's quarterly report cards.
- Behavior analysts complained that teachers rely on "gut checks" rather than data.
- Even teachers who tracked goals religiously had trouble synthesizing their results at the end of each quarter.

The animated charts delighted users and provide sense of student progress at a glance.
